## Checklist of Plants

A thorough survey has not been done on the Cobblestone property to date, but 100 plant species observed as of 2023 are recorded here. As you wander our trails, see how many of these plants you can spot and let us know what else you discover!

We are also working to remove invasive species and restore species native to the area to add diversity to the woods and improve the habitat for wildlife, from insects to birds and mammals. Let us know if you are interested in supporting or participating in our ongoing efforts.

<b>ADDITIONS: Please add what you see</b>	

An X after the common name indicates plants that are not native to the area or state. Near the gardens, you may also see a few others that have been planted, including bearded iris, that were not recorded here.

Mosses, lichens, and other fungi are not included.

List compiled by Dr. Warren Keammerer, with Deb Keammerer and Sally White.
